

SWP UICC Test Suite

Clear2Pay Open Test Solutions

Near Field Communication (NFC) is still a relatively young technology. It enables fast and secure short-distance data transfers between devices such as mobile phones, smart phones, PDAs, camera's,... just by bringing devices and tags close together.

The dawning of the NFC era opens up a whole new range of business opportunities: it's a technology with an enormous potential and the possibilities are endless. Commercial introduction of the technology will significantly simplify the way consumer devices interact with one another, helping people speed up connections, receive and share information and make fast and safe payments. However, the interconnectivity devices and tags need to be accurate and interoperable. To guarantee this, all NFC equipment needs to be compliant with the NFC Forum specifications.

Real life applications go beyond the contactless interface communication between two NFC devices. One of the possible architectures is using the UICC as a secure environment to run the application in and to store the data. Single Wire Protocol (SWP) is the communication protocol between the handset and the UICC, allowing a Contactless Front End (CLF) to communicate with the UICC.

Product Features

The Single Wire Protocol (SWP) UICC Test Suite verifies if the UICC implements the SWP layers according to the ETSI specifications. The Single Wire Protocol (SWP) is the communication protocol between the handset and the UICC, allowing a Contactless NFC Front End to communicate with the UICC.

The automated test suite is based on the ETSI TS 102 694-2 V7.0.0 (2009-10) test specification for the Single Wire Protocol (SWP) - Part 2: UICC features (Release 7).

The SWP UICC Test Suite includes test cases covering:

- System architecture tests
- Physical characteristics tests
- Electrical characteristic tests
- Data link layer tests
- SHDLC LLC definition tests
- CLT LLC definition tests

The SWP Test Suite is built on our Open Test Platform (OTP), for easy customization. It gives you the freedom to build the project, adapted to your very specific needs.

Your benefits

- **Gain time:** automated test solutions
- **Time-to-market:** prepare your NFC products NOW
- **Flexible:** built on Open Test Platform allowing to add tests or modify to your specific requirements
- **Robust:** field-proven technology used by renowned global companies
- **Trusted:** Integri tools are built on more than 18 years of experience
- **Accurate:** ensures interoperability
- **Customer confidence:** enables to deliver high quality products
- **User-friendly:** easy to install, graphical user interface

Specifications
